

Study of Off-Highway Vehicle Users in the Copper Corridor Region
Completed for Copper Corridor Economic Development Coalition and Arizona
Office of Tourism
May 2016
Data collected from March 21 – May 2, 2016 (online)

Completed by:

Maya Azzi (analysis), Masters Student, Dorothy Booth (survey design and analysis), Christine Vogt, Ph.D., Center Director for the Center for Sustainable Tourism (chrisv@asu.edu), Kari Roberg (analysis), Masters Student, Chase Perren (analysis), Undergraduate Student

Center for Sustainable Tourism at Arizona State University

Overview of Study and Methods

This research study aimed to better understand all-terrain vehicle (ATV) and off-highway vehicle (OHV) users in the Copper Corridor region. This study was done in conjunction with the analysis of event surveys and a trail user survey as strong tourist markets for the Copper Corridor region. The Copper Corridor region is an area of central Arizona that is made up of 11 mining and former mining communities. Off-Highway Vehicle usage is a common recreation activity, by both tourists and locals, within rural open areas. No prior primary data have been collected for OHV users specific to the Copper Corridor region. A student of the Spring 2016 TDM 402 class, an ASU research course, developed questions used for the online survey. As an ATV-OHV recreation user, she has familiarity with the activity in the region. Some of the questions were drawn from an Arizona Trail questionnaire, while other questions were created to measure general ATV-OHV behaviors and more specifically visits to the Copper Corridor region. This research is part of the Arizona Office of Tourism (AOT) funded project to assist the Copper Corridor Economic Development Coalition (CCEDC) to gain better insight into the outdoor recreation market of the region.

The survey was administered through Google Forms, an online data and research platform. The online survey was opened March 21, 2016 and closed May 3, 2016. A snowball sampling method was utilized by reaching out to leaders of ATV-OHV groups. We provided these leaders a survey link that they sent to their lists using email and in an e-newsletter. This occurred in March. At the close of the questionnaire, 142 responses had been fulfilled.

Demographics

The respondents to the questionnaire were varied in age range with 59% of respondents being in the age range of 45 to 64 years and 23% being 25 to 44 years old (Table 1). The majority of respondents (87%) were men (Table 1). Seventy percent of those who responded to the questionnaire came from the Greater Phoenix metro area. Twenty-five individuals identified themselves as being part-time residents or winter visitors to Arizona. Most households had two adults and slightly less than half had children under the age of 15 years old (Table 2).

Table 1. Demographic Profile of OHV Users

Age	Frequency	Percent

Participation in Off-Highway Vehicle Use

The majority (99%) of respondents, or members within the respondent's household, had driven off-highway vehicles for work or recreational purposes in the past 12 months (Table 3). For the respondents and their household members over the age of 18, 68% have used an OHV in the past 12 months (Table 4). Ninety-six percent of respondents owned OHVs utilized to ride trails in Arizona (Table 5). The most common (96%) OHV registered for highway use in Arizona was a 4-wheel drive vehicle (Table 6).

ATV	25 (60)	17 (40)
Rail Buggy or Dune Buggy	6 (86)	1 (14)

Respondent's Involvement with OHV

Three-quarters (77%) of respondents use OHVs for recreation, while 23% use OHVs for both recreation and work. Almost three-quarters (73%) of respondents are in an organized OHV group in Arizona. Forty percent of respondents always ride with friends, while 24% ride with a club, and 21% ride with family (Table 9). Riding groups varied in size, generally between two and five or more individuals, with members between the ages of 41 and older (Table 10). Men were more likely to ride in groups of five or more men, compared to groups with women riders (Table 11). This result might be explained by more men responding to this survey or that rider groups tend to have fewer women who ride.

OHV Users in the Copper Corridor

Forty-four percent of respondents first learned about OHV trails and recreation areas in the Copper Corridor from an off-road club or group, while 31% first learned about this information through a friend or word of mouth (Table 12). Most respondents (96%) had ridden in the Copper Corridor as a passenger or driver (Table 13). Thirty-five percent of respondents have visited the Copper Corridor six or more times in the past 12 months (Table 14).

January (75%), February (74%), and March (66%) were the months that respondents visited the Copper Corridor the most, within the past 12 months (Figure 1). Figure 2 and Table 6 show that 4-wheel drive vehicles (62%) and off-highway vehicles (42%) are the most used type of OHVs in the Copper Corridor.

Martinez Canyon was identified as being the most ridden trail (60%) in the Copper Corridor over the past five years (Figure 3). Charouleau Gap (45%), Hackberry Creek (44%), and Martinez Cabin (43%) trails followed Martinez Canyon (Figure 3). Fifty-one percent of respondents typically visit the Copper Corridor only on the weekends, while 11% typically visit only on weekdays (Table 15). Respondents indicated that their primary reasons for riding in the Copper Corridor Area were to explore (94%) and socialize (60%) (Figure 4). When asked about trailhead markings and way-finding, 31% indicated seeing trailhead markings and only some way-finding points along the trails throughout the Copper Corridor (Table 16). Sixteen percent indicated signage was adequate and 2% rated as excellent. Twenty-four percent indicated only trailhead markings exist and 27% reported no trailhead markings or way-finding exists.

Recent Copper Corridor Visits

The majority (82%) of respondents use the Copper Corridor trails for day use only, while 18% will utilize the trails for multi-day trips (Table 17). For those who utilize the area for multi-day trips, dispersed camping areas (with essentially no facilities) (71%) was indicated as being the most frequented place to stay and Tonto National Forest Area (28%) being the second most selected (Figure 5). Over half (51%) of the multi-day users responded that they generally stay two nights, while 33% stay one night (Table 18). The majority of day users (71%) responded to staying up to six hours on a single recreation visit (Table 19).

Current Membership to OHV Organizations

Over half of the respondents (53%) are current members of jeep and four-wheel drive associations, and 43% are members of motorcycle clubs (Figure 6). Respondents were asked which clubs they are most active in specifically pertaining to ATV-OHV use. Tonto Recreation Alliance (TRAL) was mentioned 19 times, Trail Riders of Southern Arizona (TRS) was mentioned 17 times, and Arizona Trail Riders was mentioned 13 times (Table 20).

Conclusions and Recommendations

Outdoor recreation is a valuable asset to the Copper Corridor. ATV and OHV users make up a considerable amount of those who recreate amidst the natural beauty of the area. Therefore, understanding the niche market of OHV users can better help not only environmental conservationist efforts, but also provide further insight to the wants and needs of those who already participate in OHV recreation within the Copper Corridor area.

The majority of OHV users (82%) were between the ages of 25 and 64 years old and male (87%). Eighty-two percent of respondents to the questionnaire were full time residents of Arizona, while 18% were part-time residents to the state. Of those that responded to being full-time residents, 70% came from the greater Phoenix area, with 23% coming from the greater Tucson area. Seventy-seven percent of respondents said they were married, with 91% percent ethnically identifying as being White.

The majority of respondents are day-use visitors, and of those, most are out on trails for six or more hours. Growing the service offerings in the Copper Corridor would be beneficial to the area. Dining options, groceries, and other services could be utilized by ATV and OHV users. Marketing services as well as other activities available in the Copper Corridor could result in longer visits, increased overnight stays and increased economic impact to the Copper Corridor.

Survey results show most people are using ATVs and OHVs with friends. Gearing marketing of activities to appeal to groups of friends would be beneficial when trying to attract ATV and OHV users. Camping has been indicated as popular for an overnight stay. Retreat accommodations may also appeal to this group.

Visitation to Copper Corridor is strong, with 96% of respondents having used an ATV or OHV in the Copper Corridor, and 36% visiting six or more times in the last 12 months. The majority of respondents heard about the trails of the Copper Corridor from an off-road club or group. This could be further leveraged by building relationships with ATV and OHV groups and engaging in opportunities to display Copper Corridor brochures, dispense information in newsletters, pursue advertising opportunities, and other marketing efforts.

Thirty-one percent of respondents indicated seeing trailhead markings or wayfinding points in the Copper Corridor. This presents opportunity for further signage, which could ensure trail users stay in designated areas, as well as encourage further visitation and longer visits to the Copper Corridor.

The Arizona Office of Tourism (AOT) also offers free services that should be utilized by the Copper Corridor. Press releases regarding trail developments, events, recreation opportunities and other news should be sent to AOT. Public events can also be submitted for inclusion on the Calendar of Events page, and businesses can manage listings on visitarizona.com. Efforts to include the ATV and OHV usage in AOT's FAM tours, as well as future Copper Corridor FAM tours are encouraged.

Copper Corridor OHV Survey

The purpose of this survey is to identify users of the Copper Corridor Off-Road Trails, the types of Off-Highway Vehicles utilized on the trails, the amount of time spent on the trails, and ways to improve the recreation area to enhance the visitor experience and entice others to visit.

* Required

Untitled Section

Copper Corridor

The Copper Corridor encompasses over 2,000 square miles and is located east of Phoenix and northeast of Tucson on Route 77, while continuing north on Route 177. Along this path there are many trails suited for all levels of drivers and riders.

Participation in Off-Highway Vehicle (OHV) Use

This section is designed to identify you and your household's general use of Off-Highway Vehicles.

1. **1. Have you or anyone in your household driven or ridden an Off-Highway Vehicle (such as ATV's or 4-wheelers, dirt bikes or dual sport motorcycles, 4-wheel drive trucks and jeeps, sport utility vehicles and rail buggies or dune buggies) for work or recreational purposes in the past 12 months in Arizona? ***

Check one.
